

From consulting to training: **complete support by TVN Tech**

Consulting

We offer a personalized approach and strategic support, guiding our clients in choosing the solutions best suited to their production needs.

In-house production

TVN Tech machinery is designed and manufactured internally, starting from a thorough research process and the selection of the most durable and high-performance materials.

Installation

We make sure everything is ready for the machine startup. Our team of experts oversees the installation to guarantee a smooth implementation.

Training

Through a dedicated training service, we provide our clients with all the necessary skills to make the most of each machine.

COMPLETE LINES
BALL manufacturing

CUTTING-EDGE TECHNOLOGY SINCE 1982

QUALITY RESULTS, INNOVATION, AND PRODUCTIVITY OPTIMIZATION:

the complete solution
for ball manufacturing.

HIGHEST PRODUCT QUALITY

- Quality begins in the first production phase. The line ensures precision from the sheet to the ball.

INNOVATION

- Cutting-edge technologies and new accessories enable the production of lighter, more competitive balls.

PRODUCTION OPTIMIZATION

- The complete line boosts productivity by reducing material waste and streamlining workflows.

FLEXIBILITY

- With TVN Tech molds, it's possible to produce any type of ball without modifying the machinery.

.1

ROLLING MILL

Produces sheets with consistent and precise micrometric thickness.

.2

MULTIPLE STRIP CUTTER MACHINES

Ensures cutting accuracy within hundredths of a millimeter, with complete repeatability.

.3

TUBE FORMING MACHINE

Manufactures perfectly welded tubes of various profiles and sizes, offering utmost reliability for continuous operation.

.4

CHAIN WIRE-DRAWING MACHINE

The length of the machine and working stroke are customizable, speed is adjustable. Maintenance is reduced to simple level controls.

.5

BULL BLOCK

Enables wires to achieve optimal diameters for subsequent stages.

.6

BALL MACHINE

Continuously produces loose balls, ball chains, elastic chains or rosary chains. The mechanical tube feed with a cam system ensures the highest productivity.

.7

ROLLING BALL MACHINE

The work cycle is customizable and saveable, with fully automatic control. Its solid structure guarantees easy maintenance.

> The complete line is optimized to achieve the best results. However, all TVN Tech machines can be purchased individually as they work independently.

Custom molds to meet all needs
The ball machine ensures high productivity, consistency, quality results, and long-lasting performance. However, it's the molds that provide flexibility and versatility in production. With these molds, you can create lighter balls, solid balls, barrel-shaped, or oval ones without any modifications to the machine.
